Athabasca Uranium Mining Industry Association of Canada (AUMIAC)
Athabasca Uranium Mining Industry Association of Canada (AUMIAC) is a non-profit organization that represents the interests of companies involved in the exploration, development, and production of uranium in the Athabasca Basin region of Saskatchewan, Canada. The association was founded in 1980 and has its headquarters in Saskatoon, Saskatchewan. AUMIAC's mission is to promote the safe, responsible, and sustainable development of the Athabasca Basin uranium resource, which is one of the largest and richest uranium deposits in the world. The association works to advocate for policies and regulations that support the industry, as well as to provide information and education to the public about uranium mining and its benefits. AUMIAC's members include companies such as Cameco Corporation, Orano Canada Inc., and Denison Mines Corp., among others. The association also collaborates with other organizations, such as the Saskatchewan Mining Association and the Canadian Nuclear Association, to address issues of common concern. AUMIAC's activities include hosting conferences and workshops, publishing reports and newsletters, and engaging with stakeholders, including Indigenous communities, government agencies, and environmental groups. The association's goal is to ensure that the Athabasca Basin uranium resource is developed in a way that is safe, responsible, and sustainable, and that benefits the local communities and the broader economy.
